Any physical or operational limitation on the capacity of the stationary source to emit a pollutant, including air pollution control equipment and restriction on hours of operation or on the type or amount of material combusted, stored, or processed, must be treated as part of its design if the limitation or the effect it would have on emissions is federally enforceable.

Secondary emissions must not be counted in determining the potential to emit of an emissions unit, emission facility, or stationary source. Fugitive emissions shall be counted when determining potential to emit unless an applicable state rule or federal regulation states otherwise.

Subp. 35b. **Reconstruction.** "Reconstruction" means replacement of depreciable components of an existing emissions unit to which a New Source Performance Standard or state air pollution control rule is applicable, to the extent that the fixed capital cost of the depreciable components exceeds 50 percent of the fixed capital cost of depreciable components that would be required to construct a comparable entirely new emissions unit.

Secondary emissions include emissions from any offsite support facility which would not be constructed or increase its emissions except as a result of the construction or operation of the major stationary source or major modification. Secondary emissions do not include any emissions that come directly from a mobile source, such as emissions from the tailpipe of a motor vehicle, from a train, or from a vessel in transit.

In calculating the net increase in emissions from a particular physical change or change in the method of operation, secondary emissions must not be included unless they are specific, well defined, quantifiable, and impact the same general area as the stationary source or modification that causes the secondary emissions.
