

7049.0390 CALCULATION OF REVISED DISCHARGE LIMITS WITH REMOVAL CREDITS.

Revised discharge limits for a specific pollutant must be derived by use of the following formula:

$$y = \frac{x}{1 - r}$$

where:

x = pollutant discharge limit specified in the applicable categorical pretreatment standard;

r = removal credit for that pollutant as established under parts 7049.0400 and 7049.0410 (percentage removal expressed as a proportion, such as a number between 0 and 1); and

y = revised discharge limit for the specified pollutant (expressed in same units as x).
