

7049.0530 CONTENTS OF APPLICATION FOR PERMIT.

In addition to all information required by the control authority, applications by categorical industrial users shall provide the following information:

A. sufficient information to enable the control authority to determine the correct federal point source category and subcategory for the industrial user;

B. a description and drawing of the location of the proposed monitoring point;

C. production data sufficient to determine correct limits, required only for categorical industrial users subject to categories with production-based standards; and

D. information sufficient to correctly apply the combined waste stream formula, if the monitoring point proposed by the categorical industrial user includes multiple waste streams requiring the use of the combined waste stream formula under part 7049.0350. This may include identification and flows of the waste streams present at the monitoring point, plus engineering, production, sampling and analysis, and other information on each waste stream to allow the control authority to make all determinations necessary to correctly apply the combined waste stream formula.
